

ABSTRACT OF THE DISCLOSURE

5 A beverage container attachment is provided that includes a
cup portion having an inner surface that forms a reservoir for
receiving a food substance and a connector having an opening,
wherein the connector is for attaching the cup portion to a
beverage container. The beverage container attachment also
includes a beverage regulator attached to a wall that defines the
connector opening to allow a beverage to enter the reservoir
through the connector opening while preventing the beverage from
10 exiting through the connector opening.
